

CONDITIONAL CLOUMN

Conditional Column in Power BI

Conditional Column is used in **Power Query** to create a new column based on conditions.

- It works like **IF-ELSE** logic.
- You can set conditions such as **equals, greater than, less than, contains**, etc.

Example:

If Sales > 10,000 → **"High"**

If Sales > 5,000 → **"Medium"**

Otherwise → **"Low"**

Use: Data classification, categorization, and creating labels based on existing column values.

The screenshot shows the Power Query Editor interface. A dialog box titled "Add Conditional Column" is open, allowing the user to create a new column based on a condition. The condition is set to "Sales is greater than or equal to 100". The "Then" clause is set to "Good" and the "Else" clause is set to "Bad". The background shows a data table with columns like Order Date, Ship Date, Profit, Quantity ordered new, Sales, Order ID, and a new 'Conditional Column'.

The screenshot shows the Power Query Editor interface. A dialog box titled "Add Conditional Column" is open, allowing the user to create a new column based on a condition. The condition is set to "Profit < 0 then Negative else if Profit > 0 then Positive else null". The background shows a data table with columns like Order Date, Ship Date, Profit, Quantity ordered new, Sales, Order ID, and a new 'Conditional Column'.
