

MERGE AND APPEND QUREIES

1. Merge Queries

- Used to **combine two tables based on a common column**.
- Similar to **SQL JOIN**.
- Example: Customer ID common in both tables.
- Types: **Left, Right, Full, Inner, Left Anti, Right Anti**.
- Used when you want to **add columns** from another table.

The screenshot displays the Power Query Editor interface. The top ribbon includes tabs for File, Home, Transform, Add Column, View, Tools, and Help. The Transform tab is active, showing various data manipulation options like Close & Apply, New Source, Recent Sources, Enter Data, Data source settings, Manage Parameters, Export query results, Refresh Preview, Advanced Editor, Choose Columns, Remove Columns, Keep Rows, Remove Rows, Sort, Split Column, Group By, Data Type, Use First Row as Headers, Replace Values, Merge Queries, Append Queries, and Combine Files.

On the left, the 'Queries [3]' pane lists 'Customer', 'Order', and 'Merge1'. The main area shows a table with the following data:

	CustomerID	CustomerName	City
1	C001	Rahul	Delhi
2	C002	Priya	Mumbai
3	C003	Ankit	Bangalore
4	C004	Neha	Kolkata
5	C005	Arjun	Delhi
6	C006	Sneha	Pune
7	C007	Rohit	Jaipur
8	C008	Pooja	Delhi
9	C009	Karan	Mumbai
10	C010	Meena	Chennai

The formula bar at the top of the main area contains the expression: `= Table.RemoveColumns(#"Merged Queries",{"Order"})`.

9	null	null	null	C012	2
10	null	null	null	C013	5

2. Append Queries

- Used to **combine rows of two or more tables**.
- Similar to **UNION / UNION ALL** in SQL.
- Tables should have **same or matching columns**.
- Used when you want to **add**
- **rows** one below another.
